Re Response to Planning Board Review Comments
25-33 Central Street Project
Hingham, MA

Dear Mr. Shepard:

At your request we hereby submit our response as to why we did not provide a drainage analysis for the referenced project as noted in the Planning Board's May 23, 2019 letter to Respond Ventures, LLC

The existing site contains 2 separate structures with a paved area between them. Together the pavement and building coverage account for approximately 98% of the site. The entire impervious area of the site directs stormwater runoff to the existing catch basins in Central Street via overland flow. The proposed project will continue to discharge all of the site runoff (97% of the site) into the Central Street storm drain system. The difference being that while the existing runoff flows overland to the Town's drainage system, the proposed stormwater runoff will be directly piped underground into the street drainage system.

We have no other issue to comment on. Should you have any questions, please contact our office.

Sincerely,
ROSS ENGINEERING CO., INC.
